# New Generations @ Digital Art Month

The Endless Book

Algoritmarte

"The Endless Book" is a generative sketch aimed to represent an endless book with figures in an unknown language. Both the "font", the images and the background music are created using generative techniques and evolve over time: the result is a never-repeating book but the observers cannot understand it so they must limit themselves to the sensations that the current pattern can inspire.

I'm a programmer, but since the early 90s I have been interested in the relation between math and art. I explored many algorithmic and semi-algorithmic techniques for generating visual compositions, music and soundscapes. I also collaborated with some musicians to create interactive visual animations that are controlled live during their performance.
